

1. Explore file handling in C
2. Explore different modes for file opening in C
3. Explore the functions `fopen()` and `fclose()`. You can take a reference from the lecture slides
4. Create a text file and use the function `fgetc()` to read the lines and print each line to the console. Count the total characters in the file using `fgetc()`.
5. Explore the function `fscanf()`. You can take a reference from the lecture slides
6. Create a file named `output.txt`, take a string input from the user, and write it to the file using `fputs()`. Experiment with `fprintf()` and explore the difference.
